

Home Assignment - 4

1) Explain about symbols & Repeat grids.

A: Both are powerful features in Adobe XD.

Symbols: Symbols in Adobe XD are reusable elements that allow designers to create consistent design elements across their projects. When you create a symbol from an element (such as button, navigation bar or icon) any changes made to the original symbol are automatically reflected in all instances of that symbol throughout the design.

Repeat Grids: In Adobe XD are a feature designed to streamline the process of creating repetitive layouts such as lists, grids or card based designs. With Repeat grids, designers can quickly generate multiple copies of a design element & customize them simultaneously.
